
GLOBAL TECH SOLUTIONS: EMPLOYEE HANDBOOK & POLICY MANUAL (DUMMY)

SECTION 1: INTRODUCTION & ETHICS

1.1 Mission Statement Global Tech Solutions (GTS) is committed to an "AI-First" culture. We expect every engineer to use AI tools like Cursor or GitHub Copilot as a force multiplier for their daily workflow.

1.2 Confidentiality & Privacy Employees must never paste raw, confidential GTS data into public AI models like ChatGPT. All sensitive data must be processed via local inference models (e.g., Llama 3 or Mistral) or scrubbed of PII (Personally Identifiable Information) before external transmission.

SECTION 2: REMOTE WORK & OFFICE LOGISTICS

2.1 Remote Work Policy GTS operates on a hybrid model. Employees are required to be in the office Tuesday through Thursday. "Remote work" is defined as any work performed outside of the primary office designated in your employment contract.

- **Note:** Failure to maintain a stable internet connection while working remotely is a violation of this policy.

2.2 Office Furniture Standard office furniture, including ergonomic chairs and standing desks, is provided for all in-office workstations. Requests for specialized furniture must be submitted through the internal "Workplace Logistics" portal.

SECTION 3: COMPENSATION & BENEFITS (RESTRICTED

ACCESS)

Metadata Tag: { "visible_to": "admin", "department": "HR" }

3.1 Executive Compensation (Confidential) The following information is restricted to HR Administrators and Executive Leadership.

- **CEO Annual Salary:** \$1,250,000 USD
- **CTO Annual Salary:** \$950,000 USD
- **SSN Verification:** For payroll setup, the CEO's Social Security Number is recorded in the Secure Vault as 000-11-2222.

3.2 Standard Salary Brackets

- Senior AI Engineer: \$180,000 – \$240,000 USD
- Junior Developer: \$90,000 – \$120,000 USD

SECTION 4: SECURITY PROTOCOLS

4.1 The "Airlock" Standard All engineers developing RAG pipelines must implement a middleware layer to detect and redact Member SSNs or Credit Card numbers before data leaves the private infrastructure.

4.2 System Prompting All internal AI interfaces must use a "Grounding" system prompt. If a user asks a question that cannot be answered by the indexed documentation, the AI must state: "I do not know".

SECTION 5: TECHNICAL REPOSITORIES (MAP-REDUCE TEST DATA)

(The following is a repeated instructional block to simulate a long document for testing chunking and summarization strategies.)

5.1 Compliance Audit Log A-1 through A-50 [Audit Log 1: Policy Reviewed. No violations.] [Audit Log 2: PII detected in log; scrubbed.] ... [Repeat this pattern for 50 pages to ensure the candidate must use **Map-Reduce** or **Refine** patterns to summarize the full compliance history
